Subject: Support for VibeFab Proposal Led by PI Lu Sun

July 19, 2026

Dear NSF SBIR Review Committee:

Samsung Electronics America is pleased to support the VibeFab proposal led by Principal Investigator Lu Sun. This project addresses a clear need in STEM education and early-stage product development: helping non-expert creators move from an idea to a safe, manufacturable hardware prototype without requiring professional engineering fluency at every step.

At Samsung, serving billions of users across a broad ecosystem of connected devices, we see firsthand how critical it is to lower barriers for emerging hardware creators. VibeFab grounds its outputs in validated component specifications, enforces safety guardrails automatically, and defers to human judgment when a problem exceeds its scope. This represents a responsible approach to AI-assisted design well-aligned with Samsung's strategic priorities.

If funded, Samsung is interested in catalyzing VibeFab's impact through: **(1) Introductions to Samsung Next, our venture investment arm for early-stage innovation; (2) Growth opportunities through the Samsung Accelerator Program; and (3) Integration possibilities, including component datasheets, development board ecosystems, and reference hardware that could enrich VibeFab's design knowledge base.**

We look forward to contributing our engineering knowledge and ecosystem resources to realize this technology.

Sincerely,

A handwritten signature in blue ink, appearing to read "Rui Chen".

Rui Chen, Ph.D.

Chief Scientist

Senior Director of Engineering, Samsung Electronics America
